

Speculative page faults

Wednesday, 22 September 2021 10:10 (20 minutes)

Most Android vendors currently ship kernels that include Laurent Dufour's speculative page fault patchset from about 2.5 years ago. The patch set was rejected upstream at that time, due to code complexity, but provides a significant benefit to application startup times. I have been working on a new spin on the same basic idea, and came up with a patchset version which is (IMO) simpler and more bisectable. I would like to discuss performance results and gauge what our options are for upstreaming this.
