

IoThree's Company

Friday, 24 September 2021 07:00 (5 minutes)

Come and knock on our door!

The Internet of Things Microconference is in its third year at Plumbers. Talks cover everything from the real-time operating systems in wireless microcontrollers, to products and protocols, to Linux kernel and tooling integration, userspace, and then all the way up to backing cloud services. The common ground we all share is an interest in improving the developer experience within the Linux ecosystem.

In this introduction, we give a brief overview of the presenters and set the stage for the remainder of the MC.

I agree to abide by the anti-harassment policy
