Slimming down the journal

Monday, 12 September 2022 16:10 (40 minutes)

In this talk, I'll discuss the new proposed compact mode for systemd-journal. Via a number of different optimizations, we can substantially reduce the disk space used by systemd-journal. I'll discuss each of the optimizations that were implemented, as well potential improvements that might further reduce disk usage but haven't been implemented yet.
