## MGLRU results on Android

*Tuesday, 13 September 2022 17:30 (15 minutes)*

Multigenerational LRU (MGLRU) is a rework of the kernel's page reclaim mechanism where pages are categorized into generations representative of their age. It provides a finer granularity aging than the current 2-tiered active and inactive LRU lists, with the aim to make better page reclaim decisions.

MGLRU has shown promising improvements from various platforms/parties. This presentation will underline the results of evaluating the patchset of Android.
