## Migrating to Gitlab

*Thursday, 15 November 2018 14:00 (45 minutes)*

Over the past few years the graphics subsystem has been spearheading experiments in running things differently: Pre-merge CI wrapped around mailing lists using patchwork, committer model as a form of group maintainership on steroids, and other things. As a result the graphics people have run into some interesting new corner cases of the kernel's "patches carved on stone tablets" process.

On the other hand the freedesktop.org project, which provides all the server infrastructure for the graphics subsystem, is undergoing a big reorganization of how they provide their services. The biggest change is migrating all source hosting over to a gitlab instance.

This talk will go into the why of these changes and detail what is definitely going to change, and what is being looked into more as experiments with open outcomes.
