

Android Automotive Virtualization

Monday, 24 August 2020 10:45 (15 minutes)

Virtualization is coming to automotive and helping advance the industry. Google is working on a reference VM platform for Android Automotive OS based on virtio and open standards.

Our work in this space builds on the cuttlefish virtual platform and adds support for new devices, including audio, sensors and vehicle bus access.

The session will focus on our design goals and choices, how we extended cuttlefish into 'trout' for auto, and the team's vision going forward.
